iZ Support Technical Memo:

**RADAR 24 Epox Motherboard Alert – Swelled capacitors**

November 2006

---

It has recently come to iZ Technology's attention that RADAR 24's with EPOX MotherBoards (green in colour) (RADAR 24's built between Nov 2002 to May 2004, SN iZR0240211XXXX – iZR0240406XXXX) may have faulty capacitors.

The suspect capacitors are located around the CPU fan, and may be swelled or leaking fluid.

Symptoms of this conflict include: the system freezing and RADAR's unable to boot (POST).

If there are any questions or concerns, please contact iZ Technology Support.
